Jul 10, 2003

DOCUMENT-IDENTIFIER: US 20030129211 A9

TITLE: Cosmetic or pharmaceutical composition in solid form comprising bis-acyl-amides

Current US Classification, US Primary Class/Subclass (1):
424/401Summary of Invention Paragraph (3):

[0003] To overcome these problems, use is usually made of waxes or fillers. Unfortunately, these waxes and/or fillers have a tendency to make the composition matt and opaque, which is not always desirable, in particular for a lipstick. Specifically, women are always in search of a lipstick in the form of a tube which gives a glossy film; moreover, certain compositions such as lip balms or ointments can be in the form of translucent, or even transparent, sticks.

Summary of Invention Paragraph (95):

[0093] Thus, the composition can comprise a particulate phase, which is generally present in a proportion of 0-30% by weight, preferably 0-20% by weight, and which can comprise pigments and/or nacres and/or fillers usually used in cosmetic compositions. The term "pigments" should be understood as meaning white or coloured, mineral or organic particles intended to colour and/or opacify the composition. The term "fillers" should be understood as meaning colourless or white, mineral or synthetic, lamellar or non-lamellar particles intended to give body or rigidity to the composition, and/or softness, a matt effect and uniformity to the make-up result. The term "nacres" should be understood as meaning iridescent particles which reflect light.

Summary of Invention Paragraph (98):

[0096] The fillers can be mineral or synthetic, and lamellar or non-lamellar. Mention may be made of talc, mica, silica, kaolin, Nylon powder, polyethylene powder, Teflon, starch, titanium mica, natural mother-of-pearl, boron nitride, microspheres such as Expancel (Nobel Industrie), Polytrap (Dow Corning) and silicone resin microbeads (Tospearls from Toshiba, for example).

CLAIMS:

66. Composition according to any one of the preceding claims, characterized in that it comprises at least one additive chosen from antioxidants, fragrances, dyes, essential oils, preserving agents, cosmetic active agents, vitamins, essential fatty acids, sphingolipids, self-tanning compounds, sunscreens, surfactants, polymers, pigments, nacres, fillers and moisturizers.

ABSTRACTED-PUB-NO: JP 11035312A

BASIC-ABSTRACT:

Silica (silicic acid anhydride) contains a pigment .

Also claimed are powder compsns. which contain the above-claimed silica.

USE - The silica contg. a pigment can be used in cosmetics.

ADVANTAGE - The silica contg. a pigment has texture of the skin and a colour rendering effect.

CHOSEN-DRAWING: Dwg.0/0
